

Bitstream Bluetooth-Server BS12 is a complete server equipped with a industrial Bluetooth-modem for wireless connection. The server has a software download feature of code and or parameters within standard software package. Using a standard PC with serial interface, there is no need for separate FLASH programming device.

Software can also be set to enable remote download of code/parameters through air interface.

Bitstreams products are designed to interact together with the most sophisticated interactive systems available in the market today and tomorrow - WAP, GSM, Bluetooth, or even satellite communication amongst others.

Any machinery can be integrated with information processing systems via wireless communication. Your machine/equipment in one end and Your mobile or computer in the other. The Bitstream solution in the middle. Communication in both directions. Receive information from or send instructions to Your machine/equipment
